

Here's how to complete your next steps

Congratulations — you've passed the initial screening. Just a few more steps stand between you and Fiverr's AI Annotation Program.

This guide walks you through exactly what to expect, so you can come prepared.

! It is required to read all of this fully before you begin.

OVERVIEW OF NEXT STEPS

Before you start

- Set aside **30–60 minutes** in one uninterrupted sitting.
- The screening tests start the moment you register. Upon registration, you'll go straight into a skills screening test. You can retake it, but come prepared so your first score represents your abilities.
- Your English proficiency and typing will be tested via **timed** screening tests, so complete this somewhere quiet where you can focus.

NO RETAKES

You get **one attempt** to pass the final annotation exam. **There are no retakes** — don't begin the exam until you have thoroughly practiced in the training environment.

YOUR PREP CHECKLIST

Have all of these handy and prepared before you begin.

- ☐ A computer with stable internet access
- ☐ The email linked to your Fiverr account
- ☐ A mobile phone with a camera
- ☐ An authenticator app — we recommend [Google Authenticator](#)
- ☐ 30–60 quiet, uninterrupted minutes

Follow the steps below and you'll be set up to succeed.

Step-by-step

1 Log in to the annotation workspace

Go to app.annotasks.com on your computer and create an account using the email address linked to your Fiverr account.

MUST MATCH

Use the **same email as your Fiverr account** — if it doesn't match, you won't be paid.

Tip: find your Fiverr account email at fiverr.com — click your avatar in the top-right corner and you'll see the email you use for your account.

2 Complete two-factor authentication (2FA)

Complete two-factor authentication by scanning the QR code using your phone's camera and an authenticator app. Download the app in advance so you're not held up mid-process.

- **Google Authenticator** (recommended): [Android](#) · [iPhone](#)
- **2FAS** (also works): [Android](#) · [iPhone](#)

3 Fill out your profile details

- Fill out all profile questions to the best of your ability. If you are unsure, you can select "None".
- There are no right or wrong questions here.
- Enter your referral code to connect your work to your account.

REFERRAL CODE [lucky-harbor-true](#)

4 Complete the screening tests

~5–10 minutes

Three separate tests, each just a few minutes. **Speed and accuracy are both taken into account.**

TIMED

The English test starts **immediately** upon registration. Each question is timed and cannot be paused. Make sure you're prepared and have time set aside.

Test	Time	What to expect
1 · English grammar	~2 min	20 fill-in-the-blank questions, 3 answer choices each. Every question timed (a few seconds), no pausing.
2 · Typing	30 sec	Type the words shown. Measures words per minute and accuracy.
3 · Mouse skills	30 sec	Click targets fast and precisely.

5 Prepare for the annotation exam

INVEST YOUR TIME HERE

This is where you should invest the most time. The training section is untimed — practice for as long as you'd like.

You'll land on the training page and see three sections:

Section	What it is	Your move
Training	30 practice tasks — untimed, unlimited	Do at least 10–15 so you pass
Exam	5 tasks — locked until you're ready	Only start when confident — one attempt
Golden Reference Examples	5 perfect tasks	Study what “good” looks like

Do not start the exam until you have completed the training and read all the materials.

Work through the training in this order:

1. **Read the instructions thoroughly.** They're on the platform (and in the Resources section below).
2. **Watch the tutorial video** in the training section to learn the annotation platform.
3. **Study the Golden Reference Examples.** This is the fastest way to see what “good” looks like. Highly recommended.
4. **Complete practice annotation tasks.** Do at least 10–15 of the 30. You'll write a general caption of what you see, then use hotkeys to segment the video and add sub-captions.

TIP

Keep the **Cheat Sheet** (end of this packet) open beside the platform — print it or keep it handy through the exam.

10–15

practice tasks recommended

80%+

accuracy the platform expects

5–7 min

per 1-min video at first — you'll get faster

STOP — DO NOT PROCEED YET

Only move on once you have completed the training and genuinely feel confident. The exam is timed and you get one attempt — set aside uninterrupted, focused time before you begin.

6

Take the exam

After you've done the training and feel confident, clear your time and take the exam.

ONE SHOT

You have **one attempt** to pass. You **cannot** get another attempt — Fiverr support has no way of giving retries.

- Before the test starts, you'll need to read through the instructions — read them carefully.
- The exam consists of **5 tasks**. Your goal is to complete them with speed while maintaining quality.
- Do the work yourself. **Cheating detection is active** and leads to permanent removal.
- We recommend printing out or keeping the hotkeys handy (see resources below).

7

Submit for evaluation

Your submission will be reviewed against the quality standards.

You'll see your score, which clearly states whether you passed. Other details on the score breakdown are not available at the moment.

8

Get your result

If accepted, you've officially joined **Fiverr's AI Annotation Program**. We'll notify you when annotation projects relevant to your skills open up.

USEFUL RESOURCES

Resources folder — open it here →

In this folder you'll find helpful materials for every stage of the process. Feel free to download and print them so you have them handy while completing the annotation exam.

→ [Reference the Terms & Conditions here](#)

Printable reference cards

Keep these open beside the platform while you work — print them or keep them handy through the exam.

AI ANNOTATION · KEEP OPEN WHILE YOU WORK

Cheat sheet

THE 4 STAGES · ~5-7 MIN PER 1-MIN VIDEO

1 PREVIEW

~1 min

Watch the whole video once at 8× (Shift+↑). Write the high-level caption: one or two plain sentences, no hands, no jargon.

2 SEGMENT

~1 min

Back to normal speed. Press C at every distinct action. Cover everything — no gaps, no overlaps. Expect 10-12 segments per minute.

3 CAPTION

~2 min

Press G — the agent proposes 3 captions per segment. Pick with 1/2/3, then fix only what's wrong. Reuse repeats from the Label Bank (Ctrl+B).

4 REVIEW

~2 min

Play the final video with captions on. Every action covered, every caption matches the screen. Then Submit.

HOTKEYS

C

create segment / mark range

G

fetch 3 AI caption drafts

1 2 3

pick a caption option

Ctrl+B

label bank (reuse captions)

Shift+↑/↓

playback speed up / down

X / ↔

first / last frame

F

failure flag

R

recovery flag

B

bad-data flag

CAPTION RULES

✓ DO

· Simple present tense

· Plain English, short

· Only what's visible

· Name the working hand — detailed captions only

✗ DON'T

· "Trying to" / guessing intent

· Hands or operator in the high-level caption

· Technical jargon

· Vague: "moves object"

NOTHING HAPPENING? USE AN IDLE LABEL, NOT A CAPTION

NU

Not useful — no task, no hands visible

DO

Distracted operator — phone, talking, smoking

ID

Idle / preparation — waiting, no interaction

QUALITY BAR: 80%+ on segmentation & captions

Edit the wrong parts of AI drafts — don't rewrite everything.

Cheat sheet — the 4 stages, hotkeys, caption rules, and the quality bar.

The 8-Step Workflow

Follow in order for every video

EVERY VIDEO

- 1 Preview the video at **8x** `Shift + ↑`
- 2 While previewing, start writing the **high-level caption**
- 3 Slow the preview to **2x** for segmentation `Shift + ↓`
- 4 Create **segments** per discrete action `C`
- 5 VLA captioning starts automatically as you segment; if it doesn't, trigger it `Shift + G`
- 6 Paste the VLA caption if correct, or **edit** it if actions are missing `keypad 1 / 2 / 3`
- 7 If VLA fails or is slow, check the **Label Bank** for a matching caption instead of typing from scratch `Ctrl + B`
- 8 **Preview** the final segments with their captions

Note: the Label Bank populates as you write segments, so it will be empty at the very start of a video.

The 8-step workflow to follow for every video.

Annotation Hotkeys

Quick reference for video labeling & VLA captioning

KEEP
NEARBY

● CAPTIONING

C

New range, backfill a range, or a detailed caption

G

Fetch & generate VLA captions

Shift + G

Trigger VLA generation if it didn't auto-start

● NAVIGATION & PLAYBACK

Shift + ↑ / ↓

Switch preview speed (8× / 2×)

Ctrl + ← / →

Jump to first or last frame of the video

● PANELS & OVERLAY

Ctrl + B

Open / close the Label Bank

Alt + H

Show / hide the caption overlay

● INDICATORS (TOGGLE)

F

Failure indicator

R

Recovery indicator

B

Bad Data indicator

Full hotkey reference for video labeling & VLA captioning.
